SLICK TIRES ARE MADE OF SOFT RUBBER AND HAVE NO GROOVES, WHICH GIVES THEM A SUBSTANTIAL CONTACT PATCH AFTER THEY MELT SLIGHTLY ON A HOT ROAD. THEY HAVE STRONG TRACTION ON DRY SURFACES, BUT AN INCREASED CHANCE OF HYDROPLANING ON WET SURFACES.

*A CONTACT PATCH - THE PORTION OF A WHEELS TIRE WHEELS IN DIRECT CONTACT WITH THE SURFACE OF THE ROAD

RAIN TIRES HAVE PATTERNED GROOVES WHICH HELP TO DISPLACE THE WATER BETWEEN THE GROUND AND THE RUBBER OF THE TIRE. THIS MAXIMIZES TRACTION AND PREVENTS HYDROPLANING ON WET SURFACES. THESE GROOVES DEGRADATE QUICKLY ON DRY SURFACES DUE TO THE HEAT.
